

**What is claimed is:**

1. A golf bag sustained with leg means, comprising,
  - a bag body;
  - a base mounted at the bottom of the bag body and having a flat surface portion,

5 an anchored portion, and an inclined plane portion; and

  - a support piece detachably mounted at the bottom of the base, and comprising a sheet and a pair of opposing first fastening portion and second fastening portion formed on the sheet, wherein the first fastening portion is assembled with the leg means, and the second fastening portion is coupled to the anchored portion, so as to support the golf

10 bag up by means of the assembled leg means and support piece.

- 2. A golf bag sustained with leg means of claim 1, wherein the anchored portion is a parallelogram-shaped opening.
- 3. A golf bag sustained with leg means of claim 1, wherein the anchored portion comprises symmetrical openings.

15 4. A golf bag sustained with leg means of claim 1, wherein the anchored portion and the second fastening portion of the support piece are saw-shaped structures corresponding to each other.

5. A golf bag sustained with leg means of claim 1, wherein the anchored portion is formed with a plurality of protruding positioning points for phased strength of engagement.

20 6. A golf bag sustained with leg means of claim 1, wherein the inclined plane portion is formed with a first recess portion and a second recess portion.

7. A golf bag sustained with leg means of claim 6, wherein the first recess portion and the second recess portion are respectively allowed to accommodate the sheet and the

25 second fastening portion of the support piece.

8. A golf bag sustained with leg means of claim 1, wherein the sheet further comprises an elastic portion for allowing the second fastening portion to be elastically coupled to the anchored portion.
9. A golf bag sustained with leg means of claim 1, wherein the support piece further  
5 comprises another sheet extending from a side of the sheet on which the first and second fastening portions are formed.
10. A golf bag sustained with leg means of claim 1, wherein the support piece further comprises a plurality of protruding positioning points for phased strength of engagement.
- 10 11. A golf bag sustained with leg means of claim 1, wherein the sheet is formed with hollow portions.
12. A golf bag sustained with leg means of claim 1, wherein the second fastening portion is an arched protuberance.
13. A golf bag sustained with leg means of claim 1, wherein the second fastening  
15 portion is formed with hollow portions.
14. A golf bag sustained with leg means of claim 1, wherein the second fastening portion is formed with a plurality of protruding positioning points for phased strength of engagement.
15. A golf bag sustained with leg means of claim 1, wherein the support piece is made  
20 of an elastic material.
